

# I turn scattered work into systems that run.

I help growing organizations replace manual handoffs, disconnected tools, and unclear processes with thoughtful workflows, automations, databases, and operating standards.

## THE VALUE I BRING

# The tool is one layer. I design the process, data structure, ownership, controls, and adoption around it.

- 01** **DIAGNOSE**  
Clarify the bottleneck, stakeholders, risks, and outcome.
- 02** **DESIGN**  
Map the process, database, roles, approvals, and exceptions.
- 03** **BUILD**  
Configure the system, automation, forms, messages, and integrations.
- 04** **OPERATIONALIZE**  
Document, train, establish controls, and improve.

# Systems built around real operational needs.

Confidential details are intentionally limited. These case studies focus on the challenge, system design, and operational value.

## Contract intake, approval & e-signature workflow

01

Black Women's Health Imperative

### CHALLENGE

Contract requests crossed teams, budgets, leaders, and signature steps without one consistent path.

### SYSTEM

Designed a structured workflow connecting intake, conditional approvals, tracking, and e-signature across Monday.com, Zapier, and DocuSign.

### VALUE

Clear ownership, approval thresholds, status visibility, and fewer manual handoffs.

## Software access governance & lifecycle controls

02

Black Women's Health Imperative

### CHALLENGE

Application ownership, user access, costs, and onboarding/offboarding responsibilities needed central structure.

### SYSTEM

Inventoried software, mapped users and departments, centralized secure access through Okta and 1Password, and designed access review processes.

### VALUE

A stronger foundation for security, cost review, audit evidence, and timely access changes.

## Learning management system selection

03

Black Women's Health Imperative

### CHALLENGE

Multiple programs needed one platform supporting engagement, reporting, certificates, commerce, and in-person learning.

### SYSTEM

Gathered requirements, vetted vendors, compared functionality and cost with Finance, and presented the business case to leadership.

### VALUE

A structured, requirements-based decision path aligned with program and financial needs.

## Program submissions & participant tracking

04

Black Women's Health Imperative

### CHALLENGE

Student records, submissions, approvals, surveys, permissions, and calendar activity required coordinated tracking.

### SYSTEM

Designed connected operational boards with structured IDs, approval statuses, calendar synchronization, and survey tracking.

### VALUE

A more reliable operating view from participant intake through review and follow-up.

## Donation check intake automation

05

Black Women's Health Imperative

### CHALLENGE

Donation check details and images were being re-entered across systems.

### SYSTEM

Built an automated handoff that sends images and processing notes into Salesforce.

### VALUE

Less duplicate entry and a cleaner bridge between operational intake and donor records.

## Renovation project operations hub

06

Freelance client

### CHALLENGE

Project tasks, client details, budgets, and progress needed one organized operating system.

### SYSTEM

Built a custom Monday.com workspace translating the workflow into records, stages, ownership, and automations.

### VALUE

A practical command center that reduces reliance on scattered updates.
